## EDUCATION

IIT/UNIVERSITY OF WESTMINSTER

Expected July 2025

Bachelor of Science(Hons) - Computer Science;

Relevant Coursework : OOP, Databases, Data structures and Algorithms, Server Side Programming

## EXPERIENCE

**Full stack developer @ Bynery** (Startup)

April 2024 - September 2024

- Created the official website for Bynery Utilizing **Next.js**, **TypeScript**, **Tailwind CSS**, and **Spline**.
- Managed and implemented advanced animations to enhance the user experience.
- Worked with a client to integrate temperature change data of coral reefs onto an interactive Maldives map that visualizes coral reef bleaching over several years using **HTML**, **CSS**, **JavaScript**, **Flask (Python)**, **PostgreSQL**, and **Neon**.
- Cleaned and processed CSV data using **pandas** to ensure accurate data representation.
- Developed an AI-driven backend system using **FastAPI**, **CrewAI** to automatically generate educational flashcards and quizzes from study notes, significantly reducing content creation time.

## PROJECTS

**Wildlife Connect - Wildlife conservation social media app** - [FrontendGithub](#), [BackendGithub](#)

- Led a team of 5 to develop a social media mobile application using **Flutter** and **Dart** for wildlife conservation in Sri Lanka.
- The application leverages **Machine learning** to identify wildlife species from user-uploaded images resulting in a 90% accuracy rate and provides detailed species profiles.
- Created the backend using **NodeJs**, **ExpressJS** with **MongoDB** and **AWS s3** databases.
- Set up authentication and password encryption of users using **bcryptjs**.
- Implemented the **CI CD** pipeline and deployed the app on the Play Store for test users.
- Hosted the backend on **Google Cloud Run** and **Render**.

**PingPals - Event Notification app - (Currently in development)**

- Designing and building a mobile application aimed at simplifying event creation and management by allowing users to notify selected friends of events with a single action.
- Leveraging **Firebase** for real-time data synchronization, ensuring seamless notifications and status updates across devices.
- Developing a backend system using **Spring Boot** and **MongoDB** to handle user authentication, friend list management, and event scheduling, ensuring secure and efficient data handling.
- Implementing a notification system that allows users to send quick responses, track attendees, and receive real-time event status updates.
- Creating an intuitive UI in **Flutter**, focusing on responsiveness and ease of use to deliver a smooth user experience across different devices.

## SKILLS

Programming: Java, Python, Javascript, Typescript, Dart, HTML, CSS, SQL

Technologies: ReactJS, NextJS, TailwindCSS, MUI, NodeJS, ExpressJS, PHP, Flask, Flutter, Java Swing, Firebase

Database: PostgreSQL, MongoDB, MySQL, AWS s3,

Tech: Git, Postman, VSCode, IntelliJ, Eclipse, Neon, Render, Google Cloud Run

## CERTIFICATIONS

- **Udemy - Master the Coding interview - Data Structures and Algorithms.**
- **Udemy - The Complete 2023 Web Development Bootcamp.**
- **Udemy - The Complete Flutter bootcamp.**
- **Cambridge - Advanced Levels.**
- **Cambridge - Ordinary Levels.**
